## ■ Proper Usage

- When supplying the power to the timer, use switch, or relay, etc for instant supply. When supplying power slowly, it may cause malfunction.
- When supply the power to the timer, connection shown in (Figure 1) might cause malfunction due to circuitous leakage current through resistance (R) and condenser (C). Please connect resistance (R) and condenser (C) as shown in (Figure 2) to prevent malfunction due to circuitous leakage current.

- Connect bipolar output contacts as potential.
- Testing dielectric voltage or insulation resistance when the unit is installed at control panel
  - ① Isolate the unit from the circuit of control panel.
  - ② Short all terminals of the unit.
- Do not use the unit in the following environments.
  - ① Environments with high vibration or shock.
  - ② Environments with strong alkali or strong acid materials
  - ③ Environments with exposure to direct sunlight
  - ④ Near machinery which produces strong magnetic force or electric noise
- This product may be used in the following environments.
